

## **CEO's Message for July 2024**

The nature of knowledge is changing. Information is exploding at a furious pace, and the amount of data that will be created by 2025 is expected to reach 180 zettabytes. We are also witnessing the use of machine knowledge. There is a 50% probability that, in the next decade machine thinking may surpass human thinking.

In this scenario, traditional libraries are getting outdated. At Indus, they will be reorganized into Knowledge Hubs with emphasis on self-knowledge; new ways of learning; how to learn, unlearn and relearn; and media literacy. This change over will empower our students, make them good human beings, and lifelong learners.
